## Determination of Chloride Reagent test

Select the method on the device.

Prepare two clean 24 mm vials. Mark one as a blank.

Put **10 mL deionised water** in the blank.

Put **1 mL sample** in the vial.

Fill 24 mm vial with **9 mL deionised water**.

Hold cuvettes vertically and add equal drops by pressing slowly.

Add **3 drops Chloride-51 solution** to each vial.

Close vial(s).

Invert several times to mix the contents.

Add **3 drops Chloride-52 solution** to each vial.

Close vial(s).

Invert several times to mix the contents.

Press the **ENTER** button.

Wait for **3 minute(s) reaction time**.

Place **blank** in the sample chamber. Pay attention to the positioning.

Press the **ZERO** button.

Remove the vial from the sample chamber.

Place **sample vial** in the sample chamber. Pay attention to the positioning.

Press the **TEST** (XD: **START**) button.

The result in mg/L Chloride appears on the display.

### Interferences

#### Persistent Interferences

1. Reducing substances such as sulfite and thiosulfate, that can reduce iron (III) to iron (II) or mercury (II) to mercury (I) may interfere. Cyanide, Iodine and Bromide give a positive interference.
