Informatio	on on likel	v routes of exposure	
The intake	The intake of sulfuric acid is mainly to be expected via the inhalative pathway in the form of aerosols. No studies on absorbability		
are available.			
Generally, local reactions cause the main effects.			
Following impact to the skin strong local effects are the main issue. There is no indication of absorption of relevant amounts of S.			
Absorbabi	Absorbability via the gastrointestinal tract is assumed. However, no studies on the kinetics of uptake are available. [GESTIS]		
The main intake route for mercury(II) sulfate is probably via the respiratory tract. Exposure is mainly possible to dusts and			
aerosols [GESTIS]
